Summary

Computer Scientist with expertise in the MERN stack, TypeScript, and Machine Learning, specializing in developing AI-integrated full-stack applications. Passionate about leveraging Large Language Models (LLMs), Generative AI, and Multimodal Agents to build intelligent, high-performance software systems that solve complex user problems.

Education

COMSATS University Islamabad

Bachelor of Science in Computer Science (Major in AI)

Lahore, Pakistan

2022 – 2026 (Expected)

Experience

Konnecta Technical Services

Dubai, UAE (Remote)

Frontend Developer

2024 – Present

- Developed a high-performance, responsive web platform for a Dubai-based appliance repair startup using **React** and **Tailwind CSS**.
- Integrated **EmailJS** for automated client communication, enhancing service inquiry response times and lead capture workflows.
- Managed end-to-end deployment on **Hostinger**, ensuring high availability, SEO optimization, and consistent uptime.

Projects

AI Ecommerce Assistant | *React, Node.js, LangChain, LangGraph*

- Built a full-stack conversational AI agent for e-commerce, enabling natural language product discovery and rendering interactive product cards within a custom chat interface.
- Engineered advanced LLM orchestration workflows using **LangChain** and **LangGraph** for context-aware responses and agentic reasoning.
- Evaluated system performance and refined prompt chains using **LangSmith** to ensure low-latency and high-accuracy interactions.

Multimodal AI Assistant | *Python, YOLOv8, WebSockets, Selenium*

- Engineered a multimodal AI agent integrating **YOLOv8** for real-time spatial awareness and **FaceNet** for personalized identity verification and user tracking.
- Developed a low-latency communication pipeline using **WebSockets** to synchronize a lip-synced 3D avatar with neural voice synthesis via **Edge TTS**.
- Orchestrated complex system-level workflows by combining **Selenium** for automated web navigation and **PyAutoGUI** for hands-free desktop orchestration.

MetaVogue (Virtual Try-On) | *React Native, Python, Blender*

- Developed a generative AI system transforming 2D clothing images into textured 3D assets for mobile virtual try-on environments.
- Automated 3D character rigging and animation pipelines using Python scripting within Blender.

AI Based Attendance System | *Python, OpenCV*

- Developed a real-time face recognition attendance system using computer vision with automated structured data logging.

Technical Skills

Languages: Python, TypeScript, JavaScript, C++, Java, C, SQL

AI & LLM Orchestration: LangChain, LangGraph, LangSmith, Generative AI, RAG, Prompt Engineering

Computer Vision & Data: YOLOv8, OpenCV, NumPy, Pandas, Scikit-Learn, Matplotlib

Full-Stack Development: React, Next.js, React Native, Node.js, Express, Flask, Tailwind CSS

Databases & Cloud: MongoDB, PostgreSQL, Vector Databases (Pinecone/ChromaDB), Vercel, Hostinger

Tools & Automation: Git, GitHub, Docker, Selenium, WebSockets, Postman, Figma

Certifications

Machine Learning Specialization | DeepLearning.AI

Computer Networking (Cisco) | Credly

Computer Vision with Python | Udemy

AI & Deep Learning Certification | Coursera
